DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 2838

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Lethellier (U.S. Patent # 4,975,821).

Lethellier discloses claimed subject matters a DC converter (figure 1-2), including a first circuit including transformer with primary winding and first switch (figure 2, item T1 and SW1), a saturable reactor (figure 2, item Lp), a second switch (figure 2, item SW2), a snubber capacitor (figure 2, item C2), a rectifying elements (figure 2, item (CR2 and CR3) and control circuit (column 1, line 50-70).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lethellier (U.S. Patent # 4,975,821) in combinations with applicant prior art figure 1 and Cross (U.S. Patent # 5,570,278) and further in combinations with Xia et al. (U.S. Patent # 6,278,621).

Lethellier discloses claimed subject matters as explained in the claims 1-10 above a rush current limiting resistor, an auxiliary transformer and a third and fourth switch.

Art Unit: 2838

Applicant's prior teaches the utilization of similar technique for a rush current limiting resistor (figure 1) Cross teaches the utilization of the similar technique for auxiliary transformer and Xia et al. teaches the utilization of the similar technique for third and forth switch (figure 2A). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Lethellier 's power supply by utilizing the technique taught by applicant's prior art, Cross and Xia et al. for the purpose of protecting circuit components and increase efficiency.
